Dear Prime Minister,

Re: Setting targets in the Environment Bill for the reduction of plastic pollution.

Public concern over the risks and harms of plastic pollution remains enormous. The 'Blue Planet effect' has been sustained by a steady flow of scientific studies showing plastic pollution in oceans, soils, drinking water, the air we breathe and the food we eat.

The government has responded with some positive initiatives including product bans, levies and a tax on virgin plastic to drive greater recycling. Overall, though, the approach has been piecemeal. The vast majority of plastic pollution sources, ranging from single-use packaging, vehicle tyre dust, microfibres from synthetic clothing, spillage of pre-production plastic pellets ('nurdles') and more, remain unaddressed. We would like to encourage you to go further.

The Coronavirus pandemic has vividly illustrated both the essential role that plastic plays in healthcare and the scale of polluting waste created by a wholesale switch back to single-use and throw-away packaging.

Just as with climate change and carbon pollution, we need an overarching approach that achieves long-term and interim targets to reduce plastic pollution. Such an approach would cover the full range of plastic 'emissions' to the environment, focussing on the worst emitters whilst safeguarding uses of plastic that are essential to health, well-being and sustainability.

At the same time, we must avoid addressing plastic pollution in isolation; doing so risks unintended harmful consequences elsewhere. Simply switching from single-use and throw-away plastic to alternative single-use and throw-away materials will create – and is already creating – vast new waste streams and associated pollution risks.

Addressing the systemic problem of plastic pollution is a complex challenge but rising to that challenge will have far-reaching benefits. The strength of public, political and corporate concern over plastic pollution is a historic opportunity to shift away from single-use and throw-away business models in favour of an economy emphatically focused on waste reduction and reuse.

The Environment Bill provides the UK government with the chance to seize that opportunity. In so doing we can show global leadership and inspire similar changes across the world.

We have come together as a coalition of the concerned to **ask for plastic pollution reduction targets to be set in the Environment Bill**, in order to reduce the harm that this is causing to wildlife, human health and the environment.

Yours sincerely,

Together with cross-sector support from 42 organisations and individuals:

Businesses
